Experience

Raja Software Labs

2021-Present

Software Developer

Pune

- Developer on the live website which has 100 million active users. Managing the overall delivery of a team of 5 web developers.
- Played a key role in building 22 addons across 3 applications from scratch in a project. This includes building frontend using EmberJs, using APIs, writing test cases, configuring tracking events, configuring mirage setup, and lint setup to make sure best code practices are being followed.

ShreeyanshDB Software

June 2019-Dec 2019

Intern

Pune

- Project was about data migration from MSSQL to PostgreSQL.
- As an intern my role was to: Database Assessment- verifying number of objects (i.e., tables, views, procedures, functions, triggers); Database Migration- Migrating objects from MSSQL to PostgreSQL with exact same functionality; Updating Nagios core plugins and Monitoring using Nagios Core Query Tuning Activity Writing SQL Scripts ;

Personal Projects

Resume Parser using NLP

Idea is to extract necessary information like Name, Skills, Education from resume and display it on Python GUI.

- Information extraction is done using regular expression and some pre-trained NLP libraries like Spacy, PDFMiner, and pandas.

Incredible Rush

Incredible Rush is a simple game that tests your reflexes!

- A simple game where we have to match a colored ball with a color part on the square box. With every color match your score will increase by one. This game is coded using simple CPP.
